

Thinware vBackup Release Notes

Version 0.2.5 (RC2, Update 5)

KB Article: 1301001

Updated: 1/24/2013

Version Detail:

Thinware vBackup (vBackup.exe): 0.2.5.1829

Thinware vBackup Client (vBackup_GUI.exe): 0.2.1.3647

New Features/Functionality:

- 1) Added new Administrator's Guide, accessible via Thinware vBackup Client Help menu and Windows Start menu.

Improvements to Client Interface:

- 1) New form for viewing/editing settings and client preferences.
- 2) Improved validation of settings by verifying the paths and required files of integration utilities.
- 3) Added dropdown to select datastore (per host server selection) on Restore Backup wizard.
- 4) Added ability to add discovered host servers and virtual machines on Add Management Server wizard.
- 5) Added ability to add discovered virtual machines on Add Host Server wizard.
- 6) New automatic refresh of job information, backups and replicas.
- 7) Added new backup datastore option to Tools menu.
- 8) Added new ability to move backups (from one storage location to another).
- 9) Added new ability to copy and paste jobs between machines (and to same machine).
- 10) Added process to validate required integration utilities on first step of Add Job and Restore Backup wizards.

Bugs Repaired in Client Interface:

- 1) Resolved issue in datastore import process where "QuiesceGuestFileSystem" setting was imported as false when blank or unavailable.
- 2) Resolved issue where inventory tree and sub-item list items were not being properly selected/re-selected after refresh or item/sub-item add/edit/remove.
- 3) Resolved issue where virtual machines were not showing up as orphaned when invalid management/host server setting is contained anywhere in the name of another valid management or host server name.

- 4) Resolved issue where host servers were not showing in inventory when invalid management server setting is contained anywhere in the name of another valid management or host server name.
- 5) Resolved issue causing orphaned virtual machines list to not be populated when orphaned virtual machines folder was selected in inventory tree.
- 6) Resolved issue causing physical machine password to not be loaded when Edit Physical machine wizard was launched.
- 7) Resolved issue where renaming a management server did not update management server reference on attached host servers and virtual machines causing affected host servers and virtual machines to become orphaned.
- 8) Resolved issue where renaming a host server did not update host server reference on attached virtual machines causing affected virtual machines to become orphaned.
- 9) Resolved issue where renaming a host server did not update host server reference on linked replica jobs causing affected jobs to fail on execution.
- 10) Added controls to block setting a backup as managed that is named the same as an existing backup.
- 11) Backup name and location in backup definition file can be different than file system information. Revised "set as managed" process to resolve issue causing some backups to be "broken" when set as managed.
- 12) Resolved issue where backups created by a job that no longer exists do not display in backup list (added process to load all backups that have not been loaded after loading backups by job).
- 13) Corrected strict case sensitivity of job name when loading backups into backup list (removed case sensitivity).
- 14) Corrected strict case sensitivity of backup name and location when loading unmanaged backups into backup list (removed case sensitivity).

Known Issues (unresolved in this release):

- 1) Line text

Important Changes to Note:

- 1) Extended expiration date to 5/31/2013.
